

PROFILE

As a data analytics professional, I have extensive experience in data modelling, BI and general data product development.

Leveraging technologies like BigQuery, Looker, and Python technologies, I have a demonstrated history of creating data applications that track and monitor complex KPIs. Ultimately providing *actionable insight* to aid business leaders (across a multitude of business functions) in critical decision making.

With a focus on uncovering actionable insights, my ultimate passion is when data and technology intersect and allow me to solve complex problems.
